Supplementary Materials: Near-field coupling and mode competition in multiple anapole systems

Valerio Mazzone, Juan Sebastian Toterogongora and Andrea Fratolocchi*

Supplementary Figures

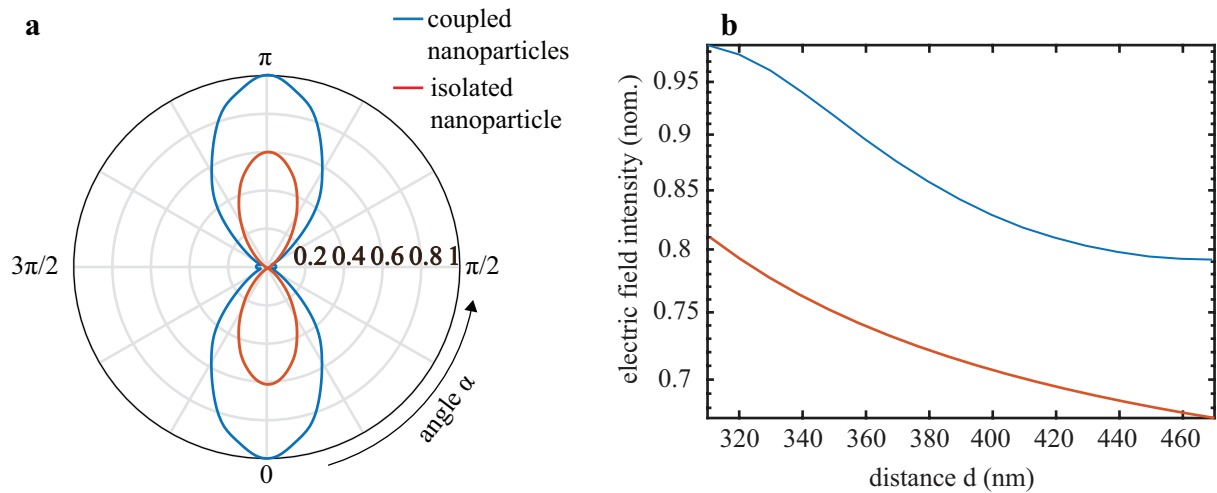

Figure S1. Scattered field from an isolated anapole state. **a,b** Electric field intensity for coupled anapole nanoparticles (blue line) and in the exterior of an isolated nanoparticle (orange line) as a function of (a) the rotation angle α and (b) of the center-center distance d . The angular distribution was measured at a distance $d = 450$ nm.
